Dold continues to expand: New sales office in Poland strengthens international presence

E. Dold & Söhne GmbH & Co. KG, a leading supplier in the field of automation, is continuing its growth course and is pleased to announce the establishment of Dold Polska sp. z o.o. With its new location in Warsaw, Poland, the Furtwangen-based company is expanding its international presence and systematically strengthening its market position in Central and Eastern Europe. The establishment of Dold Polska represents another important milestone in the company's more than 90-year success story. With this step, Dold is responding to growing demand in Eastern European markets and at the same time laying the foundation for even closer and more efficient support for its customers in that region.

Quality "Made by Dold" – now also available locally
The establishment of the Polish sales office strengthens the company's presence in Poland. With Janusz Komecki as the Polish managing director, contact with existing customers can be intensified and the Polish market further expanded. Mr Komecki has many years of experience, particularly in the field of automation. Polish customers will benefit from this expertise, combined with Dold's wide range of products and professional service. Close integration with the headquarter, a high level of vertical integration and personal customer service on site enable us to perfectly implement even individual requirements.

Dold – over 90 years of experience
E. Dold & Söhne GmbH & Co. KG is an internationally oriented medium-sized family-owned company that develops, manufactures and distributes high-quality components and solutions for safe automation in machine and plant engineering worldwide. Dold has continuously developed successfully: from a pioneer in relay technology to one of Europe's leading representatives in the field of functional safety, electrical safety and smart drive technology. The extensive product range includes components for automation, safety switches and key transfer systems, safety relays with forcibly guided contacts and electronic enclosures.
