Approvals and Markings

Function

The contacts are actuated with every current pulse and they stay in the operating position they have adopted in each case until the next pulse occurs. It is possible to actuate the contacts manually by pressing a pushbutton provided on the unit. The contact position is shown by an indicator. The units can be installed in rows close next to each other for pulse operation. The gap between the relays is 7 mm when they are on permanently.

Indicators

Red indicator: Is visible when output contacts are activated

Variants

I_ 8800.../001: For switching small loads from min. 10 mVA / mW to max. 6 VA / W at 2 ... 60 V / 2 ... 300 mA.

The contacts also permit the max. switching current. However, as the gold plating is burnt off at this current, the device is no longer suitable for switching small loads.

IK 8800.01/008: 3 mm contact spacing (only possible for one NO contact)

Safety Notes

Dangerous voltage.
Electric shock will result in death or serious injury.

Disconnect all power supplies before servicing equipment.

- Faults must only be removed when the relay is disconnected.
- The device may only be installed and put into operation by experts who are familiar with this technical documentation and the applicable health and safety and accident prevention regulations.
- The user has to make sure that the device and corresponding components are installed and wired according to the local rules and law (TUEV, VDE, Health and safety).
- Installation work must only be done when power is disconnected

Connection Examples

This circuit can be used with up to 8 illuminated pushbuttons.

With this circuit it is possible to connect as many illuminated pushbuttons as required to a remote switch.

When low voltages are being used, the control circuit has to be disconnected from the mains system by means of a transformer. It is only possible to illuminate the pushbuttons here by providing a third control wire.
