## Monitoring Technique

## VARIMETER

Translation of the original instructions

## Your advantages

- Preventive maintenance
- For better productivity
- High repeat accuracy
- Large battery voltage ranges up to DC 500 V

## Features

- According to IEC/EN 60255-1
- To monitor for battery systems (emergency power supply)
- Measuring rang DC $0.12 \ldots 1.2 \mathrm{~V}, 0.2 \ldots 2 \mathrm{~V}$ or $1 \ldots 10 \mathrm{~V}$
- Goldplated contacts to switch low loads
- With time delay 10 s
- LED indicators for operation and contact position
- Width: 45 mm

## BA 9054/331

- For battery voltages up to 300 V
- Without separately auxiliary voltage
- 2 changeover contacts

## BA 9054/332

- For battery voltages up to 500 V
- With separately auxiliary voltage
- 1 changeover contact

## Approvals and Markings

## $C \in \circlearrowleft$

${ }^{\text {1) }}$ Approval not for all variants

## Applications

Monitoring of battery systems to find voltage inversions of single cells, internal short circuits and sulphating

## Function

The middle connection of a Battery system is connected to terminal " $M$ " of the BA 9054/331. If the two parts of the voltage differ more then the adjusted value for 10 s , the output relay trips. It trips also on broken wire on terminal " M ".
The test button allows a test of the unit. It has to be pressed for at least 10 sec .

## Indicators

Green upper LED:
Yellow lower LED:
On, when auxiliary supply connected
On, when output relay acitvated

## Notes

Attention: New batteries are not symmetric in the beginning. The battery monitor has to be readjusted after some time of operation. (see setting). The adjustment has to be verified by measuring the two parts of the voltage.

The gold plated contacts of the BA 9054 mean that this module is also suitable for switching small loads of $1 \mathrm{mVA} \ldots 7 \mathrm{VA}, 1 \mathrm{~mW} \ldots 7 \mathrm{~W}$ in the range $0.1 \ldots 60 \mathrm{~V}$, $1 \ldots 300 \mathrm{~mA}$. The contacts also permit the maximum switching current. However since the gold plating will be burnt off at this current level, the device is no longer suitable for switching small loads after this.

## Standard Types

BA 9054/331 DC $0.12 \ldots 1.2 \mathrm{~V}$ DC $24 \ldots 60 \mathrm{~V} 10 \mathrm{~s}$
Article number:

- Measuring range:

0056172

- Auxiliary voltage:

DC 0.12 ... 1.2 V
DC $24 \ldots 60 \mathrm{~V}$

- Time delay

10 s

- Width

45 mm
BA 9054/331 DC 0.12 ... 1.2 V DC 110 ... 220 V 10 s
Article number:
0056204

- Measuring range: DC $0.12 \ldots 1.2 \mathrm{~V}$
- Auxiliary voltage: DC 110 ... 220 V
- Time delay:

10 s

- Width:

45 mm
BA 9054/332 DC 0.12 ... 1.2 V DC 200 ... 500 V 10 s
Article number:

- Measuring range:

0062251
DC 0.12 ... 1.2 V

- Auxiliary voltage:

AC 230 V

- Battery voltage

DC 200 ... 500 V

- Time delay:

10 s

45 mm

Application Example

BA 9054/331

BA 9054/332

## Example 1

Symmetric battery
$\mathrm{U} 1=1 / 2$ battery voltage
Adjust U 2 with tuning and fine tuning potentiometer to 0 V .

## Example 2

60 V battery set, combination of 12 V Block batteries
$\mathrm{U} 1=36 \mathrm{~V}$
Adjust U 2 with tuning and fine tuning potentiometer to 0 V .

## Example 3

Non symmetric battery (compensation of battery tolerances)
$\mathrm{U} 1=1 / 2$ battery voltage +200 mV
Adjust U2 with tuning and fine tuning potentiometer to 0 V .

## Set-up Procedure

- Find the middle of the battery voltage with the potentiometers for symmetry "grob" and "fein" (tuning and fine tuning). Differences of block batteries can be adjusted up to 12 V . The correct setting is indicated by a green LED.
- Adjust potentiometer for response value to the required value. The device is now ready to use.

## Setting

- Connect the device as shown in application example.
- Connect nominal voltage (battery voltage) to A1/A2 (/331) e.g. UB (/332).
- Set potentiometer for response value to min setting ( 0.12 V ).
- Connect auxiliary $U_{H}(/ 332)$ to A1, A2.

The device is now ready to use.
