Function Diagram

Circuit Diagrams

IL/SL 9077.12/800

- According to IEC/EN 60255-1
- Identification of overvoltage, undervoltage and phase failure
- Mains fault diagnostics with a number of LEDs
- Setting values for overvoltage and undervoltage can be set separately
- Large Setting Ranges $0.9 \ldots 1.3 \mathrm{U}_{\mathrm{N}}$ and $0.7 \ldots 1.1 \mathrm{U}_{\mathrm{N}}$
- Time delay on reset variable between 1 ... 60 s
- De-energized on trip
- No auxiliary voltage
- Independant of phase sequence
- Single-phase connection possible
- Fast reaction on overvoltage
- High overload possible
- 2 changeover contacts
- Devices available in 2 enclosure versions:

IL 9077: Depth 59 mm , with terminals at the bottom for installation systems and industrial distribution systems according to DIN 43880
SL 9077: Depth 98 mm , with terminals at the top for cabinets with mounting plate and cable duct

- Width 35 mm

## Approvals and Markings

## CE $\underbrace{\text { CC) }}_{\mathrm{A} 025518}$

*) only IL 9077/800

## Applications

Monitoring of three-phase voltage systems to identify overvoltage and undervoltage, e.g. to monitor in-house generation equipment in accordance with VDE 0100.

## Function

All 3 phase voltages are measured with N . If they are in the acceptable range, a green LED goes on and the output relay is activated.
If at least one phase exceeds the setting value for overvoltage (variable between $0.9 \ldots 1.3 U_{N}$ ) or if at least one phase falls short of the setting value for undervoltage (variable between $0.7 \ldots 1.1 \mathrm{U}_{\mathrm{N}}$ ), the output relay releases immediately on overvoltage, after approx. 0.5 s on undervoltage and the green LED goes off (fault state). 2 red LEDs then indicate the cause of the fault:

- Undervoltage " < U"
- Overvoltage " > U"

When all 3 phase voltages are below the chosen setting value for overvoltage and above the chosen setting value for undervoltage again, the relevant red LED goes out, the output relay is activated again after the adjusted delay time and the green LED goes on again (acceptable state).
When the system returns to an acceptable state, there is a hysteresis of about $4 \%$ of the set value with both the set voltage thresholds.

| Indicators |  |
| :--- | :--- |
| Green LED __/_: | State, output relay excited |
| Red LED " < U": | Fault message / undervoltage |
| Red LED " > U": | Fault message / overvoltage |

## Notes

The terminals L1, L2 and L3 have to be bridged if the relay is used in single phase systems.

Setting value for
undervoltage "<U":
Hysteresis:
Time delay: Variable between 1 ... 60 s on reset
Response Time on Overvoltage
Time the relay needs to switch off on overvoltage at IL/SL 9077.12/800: The time delay is mainly depending on the overvoltage jump (if the voltage goes just over the setting level, or much higher) and also on the phase angle of the voltage.

| voltage difference between $1.0 U_{N}$ <br> $1.0 U_{N}(230 \mathrm{~V})$ to $\ldots$ | typ. response time of the output <br> relay setting value at $1.15 \mathrm{U}_{\mathrm{N}} \mathrm{ms}$ |

## Standard Types

IL 9077.12/800 3/N AC 400 / 230 V $1 \ldots 60$ s
Article number: 0050694

- Output: 2 changeover contacts
- Nominal voltage $\mathrm{U}_{\mathrm{N}}$ : $3 / \mathrm{N}$ AC 400 / 230 V
- Time delay: $1 \ldots 60 \mathrm{~s}$ adjustable

SL 9077.12/800 3/N AC 400 / 230 V $1 \ldots 60$ s
Article number: 0054757

- Output: 2 changeover contacts
- Nominal voltage $U_{N}$ : $3 / \mathrm{N}$ AC $400 / 230 \mathrm{~V}$
- Time delay: 1 ... 60 s adjustable

## Ordering Example

IL 9077.12 /800 3/N AC 400/230 V $50 / 60 \mathrm{~Hz} 0.1$
